## The Nitrifying Bacterial Goop Company

### Pros

- Quickly correct poor water quality in your Aquarium within hours.
- Instantly cycle a new aquarium, allowing fish to be added immediately.
- Naturally grown and cultivated product.
- Biosecure no chance of pathogenic contamination.
- Cutting edge proprietary manufacturing process.
- True living nitrifying bacteria with a 72H shelf life.
- Quantities available for any volume or stocking density.
- Complete environmental colony, ensuring the very best habitat for your fish.
- Can be added to prevent ammonia spikes when adding new stock.
- Works with most waters pH's between 6.6 and 8.8

### Cons

- Not suitable for tanks at the extremes of pH below 6.5 or above 8.9
- Low GH and KH reduces its efficacy.
- Very high Ammonia levels will quickly be transformed into high nitrite before being completely broken down.
- Shelf life is only 72h @ 25°C
- Ammonium Chloride dosing for testing should be kept relative to stocking and temperature. Very high dosing will produce poor results.
